

Spicy Banana Cookies

First creation released by yours truly, my goal here was to make an affordable strain that would knock you down, but leave you wanting more. Ethos Cookies RBX was the mother of this cross with a flower time of approx 9 weeks, hit with Banana Grove pollen From Worlds Strongest Strains. Ethos Cookies RBX has been tested with Canniboids of up to approx 30% (ethos way of wording things, not mine haha). Banana Grove consists of Chiquita Banana X Garlic Grove. When even further broken down Chiquita Banana contains an average thc level of 33% with parents OG Kush X Banana. Lastly Garlic Grove is a bit of a mish mash (https://en.seedfinder.eu/.../Garlic_Grove/Compound_Genetics/) by compound genetics consisting of GMO X Orange Apricot F2 with a thc level of approx 28%.

Thus being said I believe Spicy Banana Cookies will host an approx thc level of 30% - little to no CBD (1% or less). Approx flower time of this strain will be about 9 Weeks - I like milky / amber trichomes... to each thier own. Being a Untested F1 we are unsure of terps, tastes, feels.
